| Application | Ideal for architectural installations and illuminated support surfaces with minimal thickness and no visible front frame , providing a "full light" effect. The side edge is available with customizable finishes . Not designed for luminous continuity between panels with LED sides in contact, but suitable for collinear configurations . | | | | Suitable for architectural installations and illuminated support surfaces without dimensional constraints . A "full light" solution with no visible front frame , featuring a side edge with customizable finishes. Particularly suitable for continuous compositions , even with LED sides in contact. | | | Designed for architectural installations, it ensures maximum installation versatility thanks to its dedicated structural profile with customizable finishes . A frameless front design delivers a "full light" effect. Not designed for luminous continuity between panels with LED sides in contact, but suitable for collinear configurations . | | | |

³ Luminous flux output: Lumens per meter [lm/m] × Number of LED sides [n] × X or Y dimension [m] - 55%
Ex. (2640lm × 2 × 1m) - 55% = 5280lm/m - 55% = 2376 lm/m
